### Water Conservation Policy

One of the most important resources that ensure the continuity of our planet and the entire life on it is water. The Company is aware of the vulnerability of water that is of critical importance for all activities of life against the needs of the entire ecosystem. The Company is aware of the necessity to give priority and importance to the efficient use of water, directly or indirectly, in the protection of the environmental and natural resources.

The Company takes into account the following practices within the scope of its management and authority in its projects;

- To mitigate water footprint, and to ensure water efficiency
- To develop action plans by carrying out qualitative and quantitative activities for water efficiency in the supply chain
- To establish a system for monitoring and reporting water pollution in the entire supply chain
- To assess the potential effects of our direct or indirect activities and the potential risks, and to take the necessary measures and precautions

Furthermore, the Company carries out the necessary activities in order to increase the awareness of the employees about the conservation of the water resources and consumer awareness.

The Company carries out activities in order to take under control and improve the fresh water consumption.

The targets for managing and improving the effect on the fresh water resources are developed.

Although the Company does not consider water consumption as a prior issue, it transparently shares information about the water usage and water efficiency of its stakeholders.
