Waste, Residual and Recycling Management Policy

In the Company, the Waste, Residual and Recycling Policy and planning form the basis for creating a "value". The wastes must be managed in a manner that they will not cause imbalance in the environment, they will not affect the healthy life of the society and they will not lead to economic imbalance. The residuals, on the other hand, are the most important factor of a circular economy. The main purpose of the policy is to mitigate the harmful effects of the wastes on health and environment.

The Company fosters and implements the following issues within the scope of its management authority in its projects:

- To make the necessary arrangements and to establish the necessary system for the prevention of waste formation
- To carry out informative activities promoting the reuse of the wastes for the employees and suppliers
- To establish a system for the reuse of the wastes
- To inform the employees and suppliers about the materials that are suitable and not suitable for recycling
- To restore the residuals to the economy as a new material by or without passing them through specific processes
- To comply with the legislative regulations
- To control disposable plastic consumption
- To manage the solid waste disposal and recovery systems
- To plan and manage the use of circular resources
- To foster the use of materials that are made from recycled materials
