### Biodiversity Conservation Policy

Biodiversity has been positioned as a priority while struggling with the challenges of the sustainable development with the awareness that biodiversity issue is "the breath of life". In the Company, the biodiversity issues are also dealt with as well as the environmental policy and the sub-policies.

The Company supports and implements the following issues within the scope of its management approach and authorities:

- To reduce the effect of the projects on biodiversity, to improve and develop it from the production to the material cycle
- To obtain information from the academicians and the local people about the status of biodiversity in the region where the Company will operate, and to arrange the activities in line with such information
- To conduct risk analysis, regular monitoring and reporting processes on ecosystems and biodiversity
- To avoid from the resources that may cause the extinction of biodiversity, or to collaborate with the supply chain
- To develop the projects in a manner that they will have minimum effect on biodiversity and ecosystems
- To foster the use of the products which protect biodiversity and are produced by taking into account biodiversity, to work with the suppliers with this approach
- To conduct activities for increasing the awareness of the employees, suppliers and society about the conservation of biodiversity and ecosystem in the project areas
